Ogdensburg, NJ 07439

Mr. Burlum,

I am writing you to express my thorough satisfaction with the Smart Emissions Reducer that your technicians installed on the Go Green, LLC company test vehicle, a 2006 Ford F-350 with a 6.0 Liter Powerstroke Diesel engine.

Prior to the Smart Emissions Reducer install on April 9, 2013 the vehicle was getting a combined 11.5 miles per gallon. Over the next two and a half months we observed a combined mileage of 12.6 miles per gallon. That increase represents a fuel savings of about \$450 a year on that particular vehicle for Go Green, LLC. Further, you informed us that the before and after emissions tests showed that the Smart Emissions Reducer has cut the diesel exhaust opacity from the vehicle by 72%.

The Washington DC Metro area represents one of the largest and most competitive "green" marketplaces in the U.S. As a "green" branded custom home builder in the Washington DC market, we are always looking for ways to further differentiate Go Green, LLC as an innovative and authentically "green" brand. Mileage gains of 10%, as well as diesel emissions opacity reductions of 72%, are real and very impressive numbers that we can promote to our clients as one of the many tangible ways Go Green, LLC is implementing new and innovative "green" practices, not just in our product, but throughout all of the ways we conduct ourselves as a business.

I look forward to working with Extreme Energy Solutions to install the Smart Emissions Reducer on other Go Green, LLC vehicles.

Sincerely,  
Christian Schmidt  
President  
Go Green, LLC
